

DBN
TUBETTI

Flexible. Eco-friendly.

OUR COMPANY

DBN Tubetti, sees product quality, environmental issues, production line capacities and certified guarantees as its core concerns. Thanks to the attention it pays to these aspects, the company has grown over the last few years, to become a key point of reference for its customer base.

DBN Tubetti produces deformable tubes in aluminium, which can be adapted to meet the needs of a variety of industrial sectors (food, pharmaceuticals, cosmetics). In regard to corporate management practices, one of DBN Tubetti's great strength lies in its organisation, alongside its production lines and the attention paid to technological development and machinery, not to mention the focus on certification, attesting to the seriousness of the company's approach.

The surface area of the company's premises reaches 25,000 sq. m. (10,500 sq. m. roofed). With a yearly manufacturing capacity of over 150 million items, DBN Tubetti is the ideal partner for its customer base.

ECOLOGICAL PERSPECTIVE

As a material, aluminium presents two distinct advantages, environmentally speaking. It is derived from natural resources and is very readily recyclable. It can therefore be used again and again.

End consumers encounter aluminium tubes at practically every turn – in their kitchens and bathrooms, and in the drawer holding their medicines. The great advantages of this packaging form are perfect dosing, longer product shelf life, full use of the product with no waste, and above all, a readily recycled packaging format. All that is required of users is that they separate the closure from the tube itself for separate waste disposal purposes.

Processing and recycling of aluminium packaging forms brings the used product back to its raw material form using only 5% of the energy that was required when the packaging was originally produced. This makes for enormous savings both on the economic and environmental fronts.

EnergiaPulita: green energy for you and for the environment

EnergiaPulita depends on renewable energy sources, without the use of any fossil fuels and with no release of greenhouse gasses into the atmosphere. You too can reduce atmospheric CO2 emissions, proportionately depending on your own power consumption!

OUR PRODUCTS

Over the years, DBN Tubetti Srl has specialised in the tasks required to provide customers with optimal solutions for their various specific needs. The company therefore produces flexible tubes in aluminium for any number of uses.

Pharmaceutical

We produce tubes for ointments, gels, creams and other pharmaceutical preparations.

Cosmetics

We produce tubes for hair dyes, creams and other cosmetic products.

Industrial

We produce tubes for shoe polishes, glue traps, industrial adhesives and sealants.

Food

We produce tubes for tomato paste, mayonnaise, anchovy paste, jam and other food products.

PRODUCTION

The company currently operates 7 production lines ensuring yearly production of 150 million tubes. Our products vary in diameter and length, and in the nozzle.

The diameters that we can provide are 19, 22, 25, 28, 30, 31.2, 32, 35 and 40 mm, for lengths of up to 205 mm. Conical - 35 mm. The nozzle diameters are 7, 9, 11, 13 or 15 mm – ophthalmic and hygienic.

Standard sizes

Diameter mm	Min Width mm	Max Width mm	Min Capacity ml	Max Capacity ml
19	80	19	80	19
22	100	22	100	22
25	110	25	110	25
28	120	28	120	28
30	130	30	130	30
31.2	130	31.2	130	31.2
32	172	32	172	32
35	135	35	135	35
40	140	40	140	40

QUALITY SYSTEM

The company's in-house Quality System was developed and is managed in accordance with the ISO 9001:2008 standard, and with good manufacturing practices (reg. CE 2023/2006), in order to provide guarantees concerning all operations and health procedures, as well as process and product controls, from the development stage on to delivery of the finished product (including, where required, thermal treatment).

TRACEABILITY

The efficacy of our Quality System provides required protections at all times, regarding product printing in accordance with specifications, and regarding also use of approved materials, product quality and full product traceability.

TESTS AND CONTROLS

Over and above all standard process and product controls, we avail ourselves of the services of the certified institutes, SSOG and SSICA, for specific analyses. We can provide our customers with a variety of services such as technical feasibility studies and R&D for new materials, for products of only the highest quality.
